## **Hydro Treating and Hydro Cracking Process Technology**

### **Why Choose this Training Course?**

**This comprehensive Hydrotreating & Hydrocracking Process Technology training course overlays the process fundamentals and sound knowledge of Hydrotreating and Hydrocracking processes where Hydrogen is a key material in the upgrading and treatment of refinery products and fractions. A review of the state-of-the-art in process design, energy and mass integration will be presented as potential key improvements.**

**In-depth practical review of Hydrotreating/cracking technologies is provided across the course topics. The contents focus on the Hydro-conversion of heavy products, distillates, diesel, and naphtha into other hydrogenated/lower molecular weight products, besides saturated products with enhanced Cetane number, free of sulfur, nitrogen and metals. The course also discusses some process design/chemistry and engineering principles for such processes and presents scope for improvements.**

**This training course is valuable to engineers/scientists, designers and researchers involved in the industry of Hydro-conversion in refiners. Yet it is most beneficial to those professionals with experiences in other fields and willing to acquire knowledge in Hydro-conversion processes.**

## **What are the Goals?**

- Develop deep understanding of mass/H<sub>2</sub>/energy balance in refining processes
- Gain in-depth knowledge of the state-of-the-art of material and energy integration
- Evaluate different flow schemes for hydrotreating and hydrocracking processes
- Manipulated process design and operation variables for better H<sub>2</sub>-conversion performance
- Master experiences of chemistry/kinetics, function of catalysts, clean production, environmental issues of very typical upgraded fuel productions

## **Who is this Training Course for?**

This training course is of great significance to process/operational engineers, technicians, control engineers, designers, scientists and researchers working closely in the refining industry in general or particularly Hydrocracking, Hydrotreating processes. It is also substantially beneficial to other professionals and experts who have considerable experiences in other fields of business and keen to gain sufficient knowledge in the Hydro- conversion industry. All levels of professionalism are eligible for the course, ranging from young-fresh personnel to highly experienced ones.

## **How will this Training Course be Presented?**

This training course will utilize a variety of proven adult learning techniques to ensure maximum understanding, comprehension and retention of the information presented. This includes course materials, proposed reading/state-of-the-art of the course content, lecture talks, exercises, teamwork and discussions, and solved applications. The nature of the course will be interactive and practice of how to think, not what to think will be mastered.

## Course Outline

### Day 1: Introduction: The Basics

- **Fundamentals of Mass/Hydrogen and Energy Balance in Refineries**
- **State-of-the-Art of Material and Energy Integration**
- **Fundamentals of Petroleum Refinery Processing: Downstream Crude Oil Refining**
- **Products' Specifications and Characteristics**
- **Process Design/Optimization and Heat Integration Schemes**
- **Environmental and Economic Issues**

### Day 2: Hydrotreating – Fundamentals and Principles

- **Introduction to Hydro-Conversion Processes and H<sub>2</sub> Sources**
- **Process Flow Schemes**
- **Process Chemistry and Kinetics**
- **Catalysts/ Heat of Reactions**
- **Operating Conditions, Principles and Design Considerations**
- **Hydrogen Requirements for Hydrotreating**

### Day 3: Hydrotreating – Advanced Processing

- **Reactors Design**
- **Applications to Naphtha, Middle Distillate, Gas and oil**
- **Atmospheric Residue Desulphurization**
- **Saturation of Benzene in Gasoline**
- **Potential Improvements for Material and Energy Savings**
- **Clean Diesel Hydrotreating Process Technology – Critical Issues**

## **Day 4: Hydrocracking – Fundamentals and Principles**

- **Feed Stocks and Products**
- **Process Chemistry/Kinetics**
- **Catalysts/De-activation and Re-Generation**
- **Products Quality and Yields: Process Configuration, Catalyst Type and Operating Process Variables and Parameters**
- **Reactors Technology for Hydrocracking**
- **Single Stage Hydrocracking Process Technology**

## **Day 5: Hydrocracking – Advanced Processing**

- **Two Stage Hydrocracking Process Technology**
- **Process Design Features**
- **Hydrogen Balance and Consumption**
- **Scope for Process Integration Improvements**
- **Hydrogen Balance/Integration and Management**
- **Steam/Methane Reforming**

## **Course Completion Certificate**

**On successful completion of the Training Course, the participants will be awarded a 5M International Consultancy & Training Company Certificate.**

### **Training Fees details:**

<b>Number of Participants</b>	<b>Course Price</b>
<b>1 participant</b>	<b>KWD 1650.000</b>
<b>2 participants</b>	<b>KWD 1600.000</b>
<b>3 participants</b>	<b>KWD 1550.000</b>
<b>4 participants</b>	<b>KWD 1500.000</b>
<b>5 participants</b>	<b>KWD 1450.000</b>
<b>6 and above participants</b>	<b>KWD 1400.000</b>
