Catalyst Selection & Production Optimization

Why Choose this Training Course?

The "Catalyst Selection & Production Optimization" course offers a deep dive into the critical aspects of catalyst selection, utilization, and optimization techniques in chemical and petrochemical industries. Through a blend of theoretical insights, practical case studies, hands-on exercises, and interactive discussions, participants will gain a comprehensive understanding of catalysts' role in various processes and learn how to optimize production efficiency while minimizing costs and environmental impact. Led by industry experts, this course provides invaluable knowledge and skills for professionals seeking to enhance their expertise in catalyst management and process optimization.

Embark on an enriching journey into the realm of catalysts with our transformative five-day course, "Catalyst Selection & Production Optimization." Throughout this immersive program, participants will delve into the intricate world of catalyst management, mastering essential principles, advanced techniques, and practical applications to drive unparalleled efficiency and sustainability in chemical and petrochemical industries. Participants will acquire a deep understanding of catalysts, catalysis, and the critical factors influencing catalyst performance.

What are the Goals?

- Understanding Catalyst Selection Criteria
- Characterization Techniques
- Deactivation and Regeneration
- Production Optimization Strategies
- Lifecycle Management

- Poisoning Mitigation
- Emerging Trends in Catalyst Development
- Performance Evaluation and Optimization Plan

Who is this Training Course for?

This course is intended for managers, engineers, technicians, operators, Research and Development (R&D) Professionals, Environmental & Safety professionals requiring knowledge of Catalyst Selection & Production Optimization. A section on maintenance and troubleshooting methods is also included. Personnel in operations will also find this an invaluable course.

How will this Training Course be Presented?

In addition to a set of slides and a training manual, a highly interactive instructor presentation of the most important concepts, procedures, and issues will be provided. Furthermore, the course will also use several interactive Workshops and Exercises. In addition, a selected number of highly appropriate Videos will be shown.

Course Outline

Day 1: Fundamentals of Catalysts

- Introduction to Catalysts and Catalysis
- Types of Catalysts and Their Applications
- Catalyst Selection Criteria
- Factors Influencing Catalyst Performance

Day 2: Catalyst Characterization Techniques

- Physical and Chemical Properties of Catalysts

Day 3: Catalyst Deactivation and Regeneration

- Mechanisms of Catalyst Deactivation
- Strategies for Catalyst Regeneration
- Industrial Case Studies on Catalyst Deactivation and Regeneration
- Practical Exercise: Catalyst Regeneration Simulation

Day 4: Production Optimization Strategies

- Understanding Reaction Kinetics and Thermodynamics
- Process Intensification Techniques
- Optimization of Operating Conditions for Maximum Yield and Selectivity
- Case Study: Production Optimization in Chemical Plants

Day 5: Advanced Topics in Catalyst Management

- Catalyst Lifecycle Management: Selection, Installation, and Monitoring
- Catalyst Poisoning and Prevention Measures
- Emerging Trends in Catalyst Development (e.g., Nanocatalysts, Biocatalysts)
- Final Project: Catalyst Selection and Optimization Plan

Course Completion Certificate

On successful completion of the Training Course, the participants will be awarded with a 5M International Consultancy & Training Company Certificate.

Training Course Prices:

Number of Participants	Course Price
1 participant	KWD 1450.000
2 participants	KWD 1400.000
3 participants	KWD 1350.000
4 participants	KWD 1300.000
5 participants	KWD 1250.000
6 and above participants	KWD 1200.000
